

Sumatran Tiger

Habitat: islands of Sumatra
in Indonesia

Size: males 7-8 feet long,
220-310 pounds;
females 7-7½ feet long,
165-242 pounds

Lifespan: up to 26 years

Eats: deer, pig, birds, and
small mammals

• • • • •

These tigers are only found
in Sumatra. There are only
400-500 left in the wild and
210 in zoos around the world.

They are endangered due to
poaching and habitat loss.

Cubs stay with the mom for
two years. Moms may wait
three to five years between
litters of two to three cubs.
