# Understanding Equations: Find the Missing Operation

Now that you understand how to make both sides of an equation equal, try this exercise. Add the operation symbols: addition(+), subtraction(-), multiplication(x), or division(÷) to complete the equation.

+   **−**   **X**   **÷**

(20 ⬭ 12) + 7 = 15

(4 ⬭ 18) + 8 = 80

(14 ⬭ 2) + 5 = 12

(14 ⬭ 6) + 6 = 90

(12 ⬭ 2) - 5 = 19

(8 ⬭ 4) - 5 = 27

(31 ⬭ 3) - 5 = 29

(9 ⬭ 9) + 9 = 10

(7 ⬭ 21) - 4 = 24

(22 ⬭ 11) + 9 = 11

(15 ⬭ 3) + 7 = 52

(6 ⬭ 15) + 6 = 27
