predator animal that hunts other animals for food  
protect keep safe  
regenerate to make a new body part  
thorax chest of an insect's body

mini-dictionary

### heading

#### How Starfish Move

Starfish move around very slowly on short, tube-like feet. They do this by a water vascular system, which pulls water into it to expand the starfish's "feet" so they can touch the surface.

In fact, the fastest starfish can only travel nine feet and two inches per minute.

a word or words at the beginning of a page that tell what the part is about

### table of contents
