

Easy Fractions

Part 1

Directions: Shade the triangles to show the answers.
Remember: Divide the denominator into the whole number, and then multiply that number by the numerator.

Example:

$\frac{1}{5}$ of 10 = 2

My work:

$10 \div 5 = 2$
 $2 \times 1 = 2$

What fraction of triangles is shaded? $\frac{2}{10}$

$\frac{2}{3}$ of 9 = _____

My work:

What fraction of triangles is shaded? _____

$\frac{1}{5}$ of 5 = _____

What fraction of triangles is shaded? _____

$\frac{1}{4}$ of 8 = _____

What fraction of triangles is shaded? _____

$\frac{1}{3}$ of 6 = _____

What fraction of triangles is shaded? _____

$\frac{1}{2}$ of 14 = _____

What fraction of triangles is shaded? _____

Easy Fractions

Part 2

Directions: Use the numbers to tell you how many circles to draw and how many to shade. Then, write the fraction for the shaded area.

Example: Draw 9 circles. Shade 3 parts.

What fraction of circles is shaded? $\frac{3}{9}$
